

NEW

Always "On"™

UPS Systems Inc.

Total Power is now an authorized distributor of Always "On"™ UPS systems. We now sell and service the entire product line including:

Limousin & Limousin II

Shield your home or office with the Always "On"™ Limousin Series – the transformer based UPS which provides lightning, surge, spike, transient and noise protection. Included with these UPS systems are constant Automatic Voltage Regulation (AVR) and blackout protection.

NX Series 3.0 (Dual conversion on-line)

Always "On"™ NX Series are dual conversion true on-line UPS systems which provide the attached loads with isolation from the utility or generator supply. Designed for all critical applications, all loads are supplied power from the inverter, which is fed by the batteries. Unique features standard on all Always "On"™ products are the large input range and the incorporation of an output isolation transformer. These UPS systems are available from 10kVA to 320kVA with three phase output with multiple voltage configurations.

Electrical Service Entrance (ESE) TVSS Filter

Protect your power grid with the Always "On"™ ESE TVSS filter. Installed at the power panel, it provides protection against externally and internally produced power aberrations, massive impulses, lightning induced effects and interference associated with low frequency harmonics and situations caused by accidents and/or failures in the electrical utility system. The Always "On"™ ESE TVSS filter is compatible with all operating loads including high frequency power supplies and constant current loads controlled by electronic switches.

DC UPS and Rectifiers

Increase up-time and prevent damaging electrical noise from effecting your sensitive equipment with Always "On"™ DC UPS systems and rectifiers. For use in a wide variety of applications including marine and generator supplied.

"PLC" PROTECTOR FOR ALL "PLC" APPLICATIONS

Get A/C power and data line protection in one convenience box. The Always "On"™ "PLC" 2+2 AND 2+0 Transient Voltage Surge Suppressor (TVSS) is used by data line filter users and OEMs in the various industries including petrochemical, pulp and paper, textiles, and water and sewer treatment. The "PLC" Protector can be applied to PLC's, robotics, CAD/CAM, alarm systems, scanners, controllers, medical equipment and virtually all microprocessor based "critical" equipment.
